

On March 12, I visited with Steve Moon of University Camera in Iowa City. Steve's from Sigourney, older, and very interested in the restoration of both Washington's and Sigourney's fountains. When I asked him who he would recommend to convert home movie footage of the fountain in action in the 1940s and 50s to DVD, he said that Video Center does such projects well. I proceeded to Video Center and talked with the owner, Andy Small. He said that he could preserve each individual home movie reel for the owner, plus put the footage of the fountain on a special DVD for the hydraulic engineers to view. He said that the action could be slowed down for study, then speeded up again.
